

ABSTRACT OF THE DISCLOSURE

The present invention relates to a filter assembly for a washing machine having a simple structure to separate dirt or particles involved in water. The present invention includes a filter case and a filter loaded in the filter case. The filter case includes inlet and outlet on a 5 circumference and an opening inside to make the inlet and outlet communicate with each other. And, the filter includes a cap fitted to the filter case, a shaft extending from a bottom of the cap, and an extension extending from an end of the shaft, the extension disposed to confront the opening to filter particles in water, the extension having a protrusion protruding from one side opposite to the cap.
